Ibn al-Haytham

Name : Hasan ibn al-Hasan ibn al-Haytham Abu Ali Basri.

Born : in Basra ((354 AH / 965 AD)) The period was the golden age of Islam.

Died: in Cairo in 430 AH.

Cognomen :

- Al Basri ((Relative to his hometown of Basra))
- Ptolemy II (Latin: Ptolemaeus Secundus)
- Alhazen

Specialization

- Engineer.
- Astronomer .
- Athletic.
- Doctor holds a degree in medicine.

Ibn al-Haytham

discovered the work of Ibn al-Haytham in

- in the National Library of France in Paris
- Bodleian Library in Oxford
- library of Leiden

most important works

- Ibn al-Haytham proved the fact that the light comes from the objects to the eye, and not vice versa as it was believed at that time.
- it attributed to the principles of the invention of the camera.
- the first to explain the eye full autopsy and explained the functions of its members.

In mathematics, adopted Ibn al-Haytham in his work the work of Euclid and Thebit.

Ibn al-Haytham Works

- Other works on physics
 - Optical treatises
 - Celestial physics
 - Mechanics
- Astronomical works
 - On the Configuration of the World
 - Model of the Motions of Each of the Seven Planets
- Mathematical works
 - Geometry
 - Number theory
- Other work
 - Influence of Melodies on Souls of Animals
 - Engineering
 - Philosophy
 - كتاب المناظر

Ibn al-Haytham – Wilson Theorem for the Prime numbers

- If the number $(n-1)! + 1$ divisible by n , then its prime number.

- 1) $n = \text{natural number.}$
- 2) Natural number = Prime number + composite Number
- 3) If n natural number, Then $n =$
Prime number or composite Number.
- 4) Proof by contradiction:
Let $n = \text{composite Number, Then } n = ab$
- 5) Which $a & b$ natural number
 $1 > a & b > n$

- 5) If $(n-1)!$ divisible by a & b, then it's divisible by n
- 6) Then $(n-1)! + 1$ Not divisible by n
- 7) This is a contradiction of the term, Then it's Prim Number.
- 8) Example:

$$[(5-1)! + 1] / 5$$

$$[(4)! + 1] / 5$$

$$[24 + 1] / 5$$

$$25 / 5 = 5 \text{ (Prim Number)}$$

Exercise:

1) Is 11 a prime number?

$$(n-1)! + 1 / n$$

$$n= 11$$

$$=(11-1)! + 1 / n$$

$$=(10)! + 1 / 11$$

$$=3628801 / 11$$

$$=329891$$

11 is a prime number

Exercise:

2) Is 18 a prime number?
