

Example: Decrypt the message  
 "WRGDB LV IULGB"  
 "Today is Friday"

② Shift Cipher:

Encryption      Decryption

$$C = m + k \pmod{26} \quad m = C - k \pmod{26}$$

(k should be a secret)

Example: Use shift cipher with key  $k=10$  to encrypt the word "weekend". **GOOUOXN**

Example:  
 A shift cipher is used to encrypt "math" into "KYRF". Find the key.

$$C = m + k \pmod{26}$$

$$10 = 0 + k \pmod{26}$$

$$k = 10 - 0 \pmod{26}$$

$$k = -2 \pmod{26}$$

$$k = 24$$

Example: Fatima used the shift cipher and came up with the following ciphertext.

"OXMEE" ( $k=12$ )

③ Affine Cipher

Encryption      Decryption

$$C = am + k \pmod{26} \quad m = a^{-1}(C - k) \pmod{26}$$

|                 |   |   |    |    |   |    |    |    |    |    |    |    |
|-----------------|---|---|----|----|---|----|----|----|----|----|----|----|
| a               | 1 | 3 | 5  | 7  | 9 | 11 | 15 | 17 | 19 | 21 | 23 | 25 |
| a <sup>-1</sup> | 1 | 9 | 21 | 15 | 3 | 19 | 7  | 23 | 11 | 5  | 17 | 25 |

$$a^{-1}(C - k) \pmod{26} = a^{-1}(am + k) \pmod{26}$$

$$= a^{-1}a m \pmod{26}$$

$$= m \pmod{26} = m = \text{L.H.S}$$

$$\text{R.H.S} = C - k \pmod{26}$$

$$= m + k - k \pmod{26}$$

$$= m \pmod{26}$$

$$= m = \text{L.H.S}$$

Example: Encrypt "car" using affine cipher with  $a=3$   $k=17$

|         | C  | a  | r  |
|---------|----|----|----|
| m       | 2  | 0  | 17 |
| $a+m+k$ | 23 | 17 | 68 |
| mod 26  | 23 | 17 | 16 |
|         | X  | R  | Q  |

Example:  
 Decrypt "ZVW" using  $a=11$ ,  $k=9$ .

$$m = a^{-1}(C - k) \pmod{26}$$

$$= 19(C - 9) \pmod{26}$$

|           | Z   | V   | W   |
|-----------|-----|-----|-----|
| C         | 25  | 21  | 22  |
| $19(C-9)$ | 304 | 228 | 247 |
| mod 26    | 18  | 20  | 13  |
|           | S   | U   | N   |
